

LungScan Diagnostics Center

Comprehensive Lung Imaging Report

Patient Name: luiza
Date of Report: 2025-05-08 13:16:24
Scan Result: Malignant Lung Cancer Detected (Large)

Summary of Findings:

The scan analysis indicates a preliminary classification of the uploaded lung X-ray. The AI model has detected patterns consistent with the above diagnosis based on training from thousands of radiographic images.

What Does This Mean?

This report provides a first-level analysis and does not replace expert radiological or clinical evaluation. However, it can serve as a quick preliminary check for early action.

Next Recommended Steps:

- Schedule a physical consultation with a pulmonologist or radiologist.
- Bring this report and the original image during the visit.
- Get additional imaging like CT scan or MRI if advised.
- Maintain personal health logs of symptoms, if any.

Risk Factors to Watch:

- Chronic smoking habits
- Family history of lung diseases
- Exposure to asbestos, radon, or heavy air pollution
- History of lung infections

Prevention Tips:

- Avoid tobacco and smoking
- Use air purifiers and avoid heavily polluted environments
- Regular exercise and breathing practices
- Annual lung health screening for high-risk individuals
